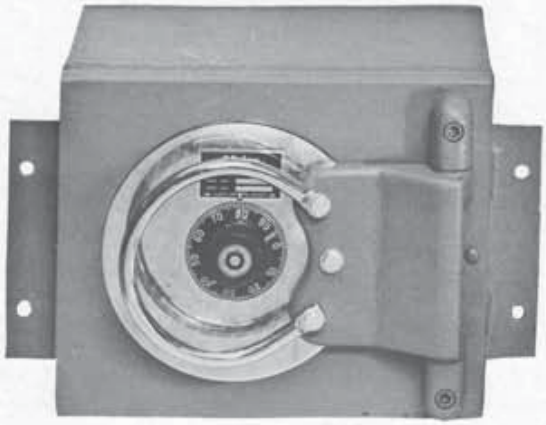
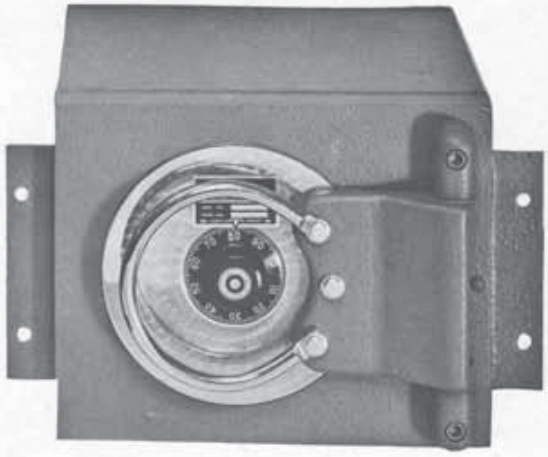
"B" AND "C" RATED WALL SAFES



W798



CW1080

Major wall safes are for those who want the very finest in quality, appearance and security for the home or office. These beautifully nickel plated and jeweled wall safes can be concealed in the wall or mounted in claddings or in any of our insulated record safes.

The unique nickel plated and jeweled door provides features unavailable elsewhere. The doors are machined from a forged steel blank and fit precisely into a machined A36 steel frame. The proprietary locking mechanism incorporates a U.L. approved Group II combination lock with one million possible combinations and a U.L approved relocking device. The three locking bolts incorporate a drive resistant feature under U.S. Patent 3158017. In addition to a drill resistant hard plate incorporated in the door, the drop-in point for the lock is randomly located. This means that, unlike other designs, there is no single point of drill attack between doors.

The electrically welded body is finished with impact resistant urethene paint on the outside with green flocking on the interior.

Available in both "B" and "C" Mercantile and Broad Form rated models, these safes combine jewel-like appearance, convenience and security.

OPTIONS

- Key change combination lock (specify KC).
- Removable dial.
