

CHUBB

BANKERS TREASURY

HIGH SECURITY SAFE

Size 3420

As its name suggests, the Bankers Treasury is a high security safe designed to protect large amounts of cash and other valuables. Advances in industrial cutting and demolition techniques have provided the modern safe burglar with an extensive armoury. The Bankers Treasury is the result of exhaustive research involving all known practical forms of attack. This safe provides excellent resistance to attacks with disc cutters, drills, percussion tools, oxy-acetylene, oxy-arc and explosives.

DOOR The door has a total thickness of 190mm. It consists of inner and outer steel plates enclosing Chubb

Anti-Arc barrier. These give a total barrier thickness of 73mm. Chubb Anti-Arc material provides protection against all forms of oxygen cutting tools, including the very high temperature oxy-arc and arc-air tools. The door contains a high concentration of very hard abrasion resistant material which blunts drills and wears out discs, thus providing a very high level of protection against all practical forms of safe attack.

The lock and boltwork are enclosed by a hinged lock case cover secured by two Chubb locks.

BODY The body is a single monolithic casting of Chubb's torch and drill resisting

to the inner steel plate. As in the door, this barrier contains a high concentration of abrasion resistant material.

BOLTWORK The door is secured by 38 mm diameter moving bolts which extend from all four sides of the door. When the safe is locked, Chubb's design of isolator completely disconnects the bolt throwing handle from the bolts. The safe is fitted with glass and other types of relocker which ensure that the bolts remain extended under a variety of attacks.

FITTINGS Racking accepts the following optional fittings. • Heavy duty shelves • Lockable cupboards • Lockable drawers • Night safe and other deposit traps (sizes 3420 and over only). For details see table overleaf.

BASE FIXING The safe is prepared for secure base fixing.

FINISH Attractive warm light grey spatter finish to suit any environment. The handle,

These very hard materials are used in the barrier to blunt drills and discs

PROOF OF PERFORMANCE.

All Chubb designs are thoroughly tested to destruction at our Wolverhampton factory. This is what our customers have to say about their Chubb Bankers Treasury Safes

“ The thieves used oxy-acetylene cutting equipment, but despite a prolonged attack lasting well into Monday morning, failed to cut their way into the safe.

North East Midlands Cooperative Society Ltd.

The intruders used oxygen cutting equipment and despite an attack over a number of hours, failed to burn their way into the safe.

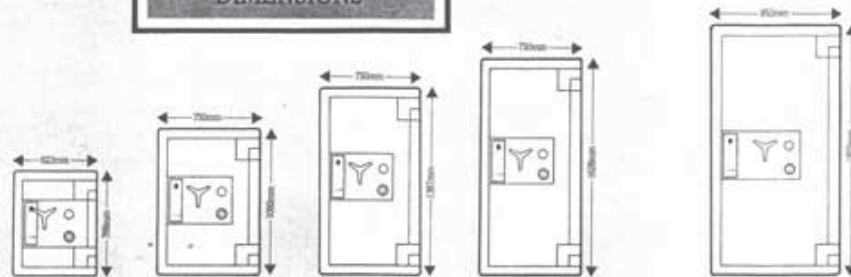

Handsworth Dairies Ltd.

” Despite the fact that this was an attack sustained over many hours, and carried out with oxy-acetylene cutting equipment, the safe held and the contents remained untouched by the criminals
Julians Frozen Foods Ltd.

Copper in Door

DIMENSIONS

The Chubb Bankers Treasury is made in Britain.
