**DIEBOLD®
4-HOUR
DATA-SAFE**

Diebold Data-Safe's unique "safe-within-a-safe" construction has withstood extensive testing by Underwriters' Laboratories, and still protected its contents of data tapes, disk packs and other computer media against a raging fire, with accompanying heat, smoke and humidity.

During these tests, in the U.L. testing furnace, the Data-Safe's internal temperature remained below the maximum allowable limit of 150° F., while the relative humidity remained under 85 percent. In addition to fire and heat endurance tests, the Diebold® Data-Safe® passed the explosion test and the impact test as specified by U.L.

Also, in tests made by our laboratories, the Data-Safe protected its tapes against magnetic force produced by a powerful magnet placed against the exterior of the safe.

Steel exterior and U.L. Listed combination locks discourage theft and vandalism.

FOR STORAGE OF EDP MEDIA

- TESTED PROTECTION AGAINST FIRE, HEAT, HUMIDITY, SMOKE, MAGNETIC FORCE
- FLEXIBLE INTERIOR
- HIGH CAPACITY

OPTIMUM CAPACITIES—FLEXIBLE INTERIORS FOR TODAY'S AND TOMORROW'S NEEDS

The Data-Safe's interior can be arranged (and rearranged) to house a significant quantity of data tapes, disk packs and other EDP media. It can also be arranged to house a combination of different media in the same safe. You can also provide for today's needs, with a safe that can change.

MODEL	OUTSIDE DIMENSIONS (Inches)			INSIDE DIMENSIONS (Inches)			WEIGHT EMPTY
	HIGH	WIDE	DEEP	HIGH	WIDE	DEEP
