

Major TL-30 Rectangular Door Money Safes

Security and convenience

Major's TL-30 rectangular door safes are made especially for stores, banks and other businesses which require security and convenience in the storage of such valuables as cash, coins, papers and jewelry.

These safes have been thoroughly tested by Underwriter's Laboratories, Inc. and awarded the TL-30 label. They have proved themselves exceptionally resistant to attacks by power and hand tools.

Built extra tough for super protection

By qualifying for low F rates on Mercantile Safe and Broad Form policies and a G rating on Bank policies, Major's TL-30 safes provide affordable, convenient security.

Even the exterior is more efficient, with front-mounted precision ball-

bearing hinges that take up less room than conventional side-mounted hinges. The textured urethane coating is exceptionally resistant to chipping, staining and abrasion for years of "like new" appearance. The standard color is Major grey but other colors and color matching are available.

Optional modular interiors, including shelves, coin racks and individually-locked compartments, are available to meet particular needs. Major also offers special safe and cladding sizes to your specifications.

Advanced features

The large door gives access to all of the interior. A unique locking mechanism makes it possible to store roll coin in the door for maximum efficient use of space.

Major's proprietary hardplate incorporates tungsten carbide in a

steel matrix to make a plate which is extremely hard and tool resistant. It protects the lock, locking mechanism and relockers. A lamination of armor plate provides additional tool resistance to the entire door.

Multiple relocking devices deadlock the bolts if the dial, handle or lock are attacked. The hardened bolts and their actuating mechanism are located against solid stops when locked to resist punching, driving, wedging, abrasive wheel and saw attacks. Recessed and welded door jambs prevent the door being driven into the safe.

The spy-proof chrome dial prevents unauthorized observation of the combination. The U.L. Group 2 key change combination lock offers 1,000,000 possible combinations.

Optional equipment

Major's TL-30 safes offer a number of optional convenience and security

features. Select those to meet your specific requirements.

Coin Racks permit quick, easy stacking of coins by denomination.

Shelves allow proper organization and storage of cash and trays, jewelry display boards, etc.

Deposit Compartments allow for periodic trimming of cash registers and armored car pickup of deposits.

A Key-Locking Dial which prevents dialing of the combination without a key and for day control.

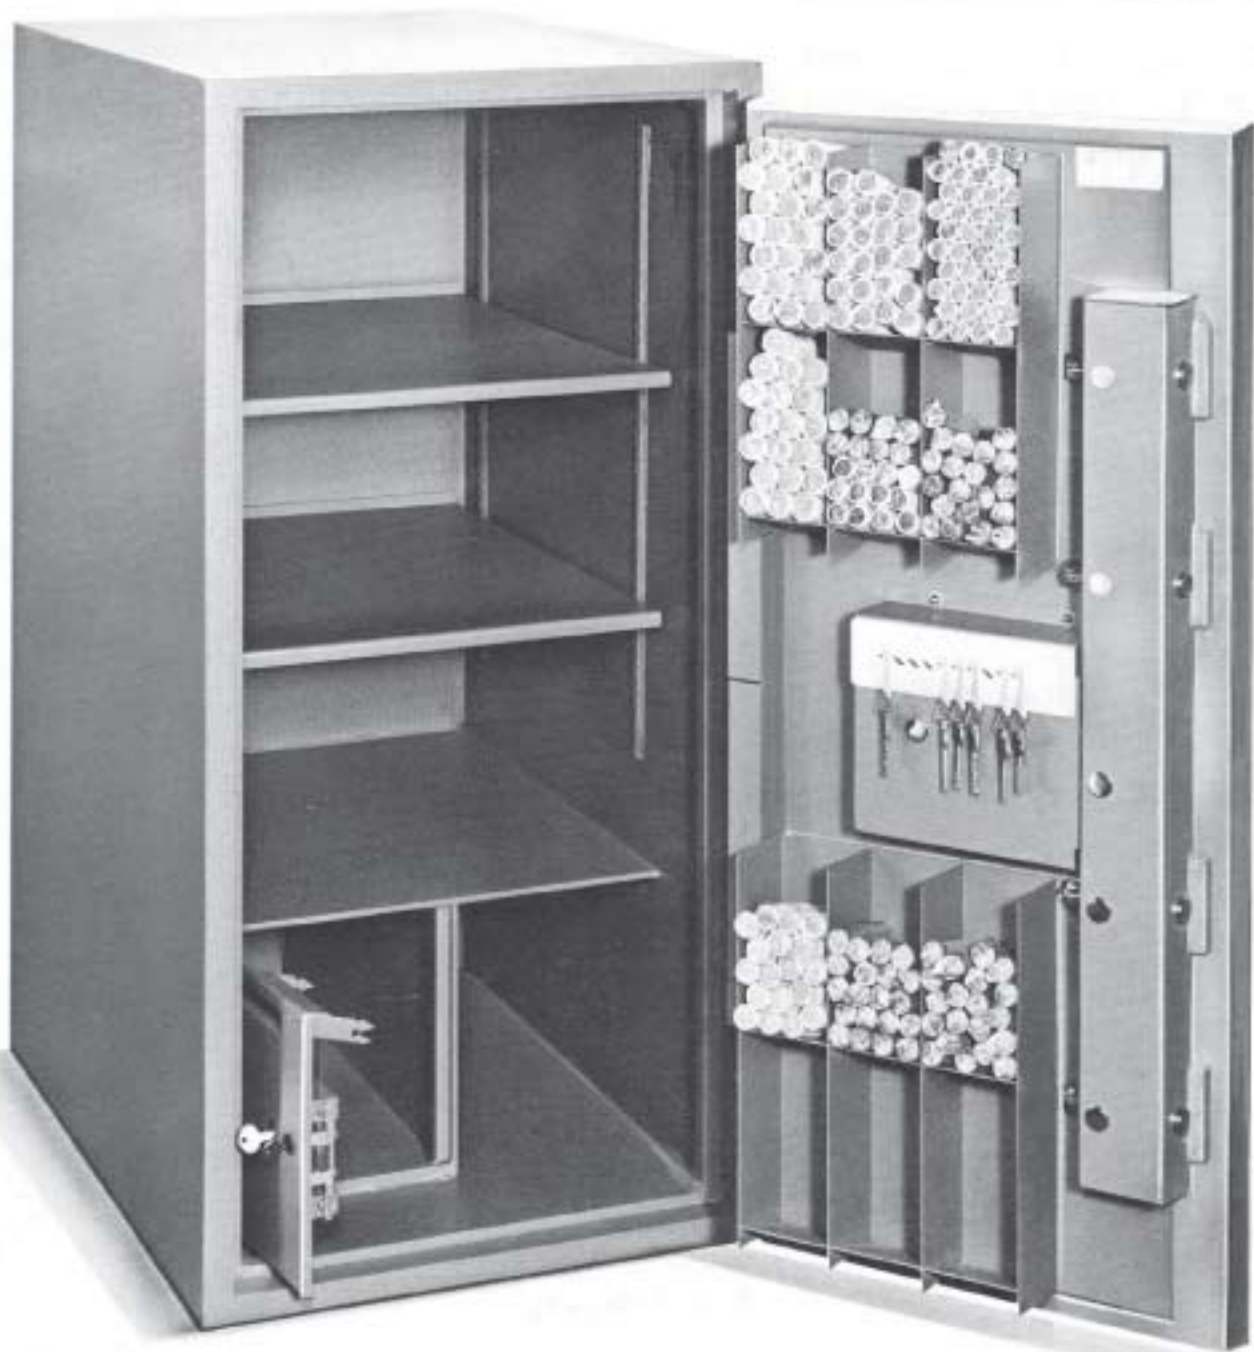

Time Delay Lock

Two- or Three-Movement Time Locks

U.L. approved Group I or IR Locks

Wire Wrap in clad units for alarms

Door Mounted Key Rack

Note: Shelves, coin rack, deposit compartment and key holder are optional extras.
