This locker, when anchored to the sides or the floor of the truck, provides protection for drivers' receipts while the truck is enroute to the office. Body $\frac{1}{2}$ " steel plate at sides, top and back and $\frac{1}{8}$ " steel plate at bottom, electrically welded at all joints. Door measures $9\frac{1}{4}$ " high by $5\frac{1}{2}$ " wide, constructed of $\frac{1}{2}$ " steel plate which locks into body by interlocking tongue at bottom engaging with a groove in bottom plate of body. Door has $\frac{1}{2}$ " diameter steel locking bolt at the top, actuated by a flat key lock. Bolt has ratcheting device designed to hold door in securely locked position if entire locking mechanism is driven off. Door of lift-out type to provide full access to interior for removal of contents. Top of the locker is provided with a deposit slot $\frac{1}{2}$ " wide, 4" long, which is protected by an angular baffle tube with a series of saw-teeth at inner edge to prevent extraction of contents from outside of locker.

The locker is finished in Master standard wrinkle gray, as illustrated above. Special colors and finishes may be had at slight additional cost. The locking bolt and lock are dip nickel finish. The door knob is bright nickel.
