

LOW COST—BURGLARY Protection for Markets

This unit is designed to fulfill all the requirements of the Market Money Storage problem, with its convenient rectangular door chest compartment for cash register tray storage, and the high security 10" round Door chest for larger amounts of cash. These two chests are anchored in a heavy steel cladding, filled with concrete at the factory or may be shipped empty to save freight.

BODIES of both chests are constructed of 1" solid thick steel plate electrically welded.

DOORS constructed of 1½" thick steel back of lock—equipped with hard plate. Prevents drilling with hardened bolts.

CAM protected with Patent #3158017. Prevents bolt punching.

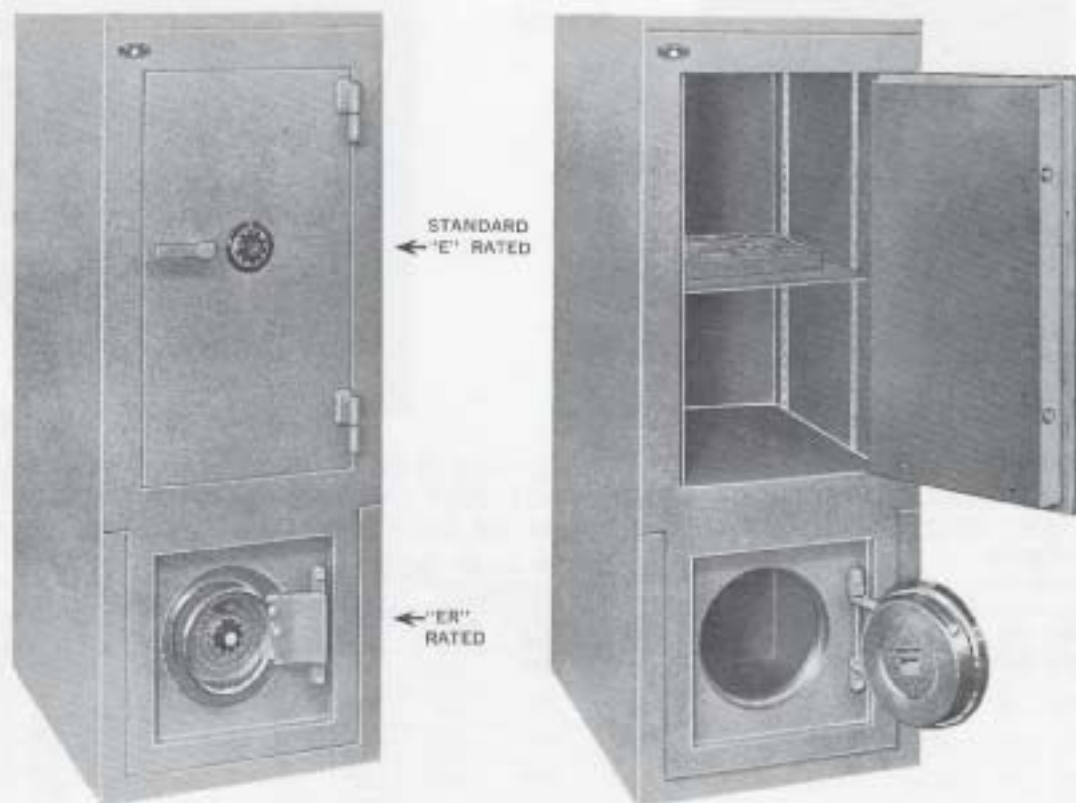

This UNIT offers better burglary protection than a fireproof cabinet safe—as the door cannot be peeled, and offers ample fire protection when filled with concrete.

• Additional charge for Key Lock Dial
